Error identification was also performed on the NIPS 2015 dataset.</li><li>• Evaluated a RNN model which uses lexical features to either identify regions in a sentence where a grammatical error might be present, or identify exactly which error (insertion, deletion or replacement) exists in a particular region of a sentence.</li></ul>

- Image Colorization by Patch Inference** Jan '16 - April '16  
*Computer Vision, Prof. Vinay Namboodiri* (code , poster , report )
- Implemented and evaluate a novel image colorization model inspired by the idea of “Fast Direct Super-resolution by Simple Functions” by Yang et. al. The model learns to color images by training on the luminance and chrominance values of local patches.
  - Evaluated the model on a set of scene images from the Sun Database.
- Object Tracking in Surveillance Videos** Jan '16 - April '16  
*Machine Learning Tools, Prof. Harish Karnick* (pres , report )
- Adapted the tracking model by Sam Hare in his paper “Structured Output and Tracking with Kernels” for use in the IIT Kanpur Surveillance Video Dataset, 2016.
  - Performed classification of the localized objects using various classification algorithms such as Random Forest, AdaBoost with stumped decision trees and linear SVM.
- Word Sense Disambiguation in Hindi** March '15 - April '15
